COURSE DESCRIPTION
This course introduces students to a variety of therapeutic horticulture applications found in community-based healthcare settings. Students will gain foundational knowledge in comprehensive therapeutic horticulture program plans for people with varying abilities. Students will learn evidence-based principles and facilitation techniques in therapeutic horticulture. They will also demonstrate application of therapeutic horticulture processes in weekly assignments.

COURSE OBJECTIVES
Upon successful completion of this course, students should be able to:

- Observe therapeutic horticulture delivery models and systems used in community-based settings
- Identify therapeutic horticulture interventions and methods of evaluations used to measure expected outcomes
- Explore issues surrounding therapeutic horticulture – such as, health and safety, ethics and attitudes, and standards of best practices
- Understand the distinct roles and responsibilities for implementing the therapeutic horticulture activities/programs
